

CULVER SCHOOL CROSSING AT NORDICA AVENUE

INTRODUCTION

In order to improve safety for pedestrians and students walking to and from Culver School, the Village of Niles will be making crosswalk improvements on Nordica Avenue at the southeast corner of the Culver School playground area. The improvement will extend curb and sidewalk through the parking areas to shorten the walking distance between protected curb ramps. The drawing to the left shows the realigned curb and ramps with new crosswalk markings.

WHEN WILL THIS PROJECT BEGIN/END?

Work is expected to begin shortly after Culver School classes end for the summer in early June. The project will be completed prior to class start in the fall.

WHAT KIND OF WORK WILL BE DONE?

Work will include installation of new storm sewer and removal of existing curb and sidewalk. Once underground and removal work is finished, new concrete curb & gutter, sidewalk, crosswalk appurtenances, and pavement restoration will be completed.

PARKING: HOW WILL THIS PROJECT AFFECT PARKING?

Some parking spaces will become inaccessible near the site during construction. Please try to park a little further north or south than usual to open up spaces for those nearer the project.

TRAFFIC: HOW WILL THIS PROJECT AFFECT TRAFFIC?

There will be times during construction that traffic will not be able to travel through the project site; drivers will need to find alternate routes north or south from the work location.

HOW CAN I GET MORE INFORMATION?

Please visit the **News & Announcements** section of the Village of Niles website (vniles.com) for the most current information on the project. For specific questions or issues, please contact:
